CSR Report

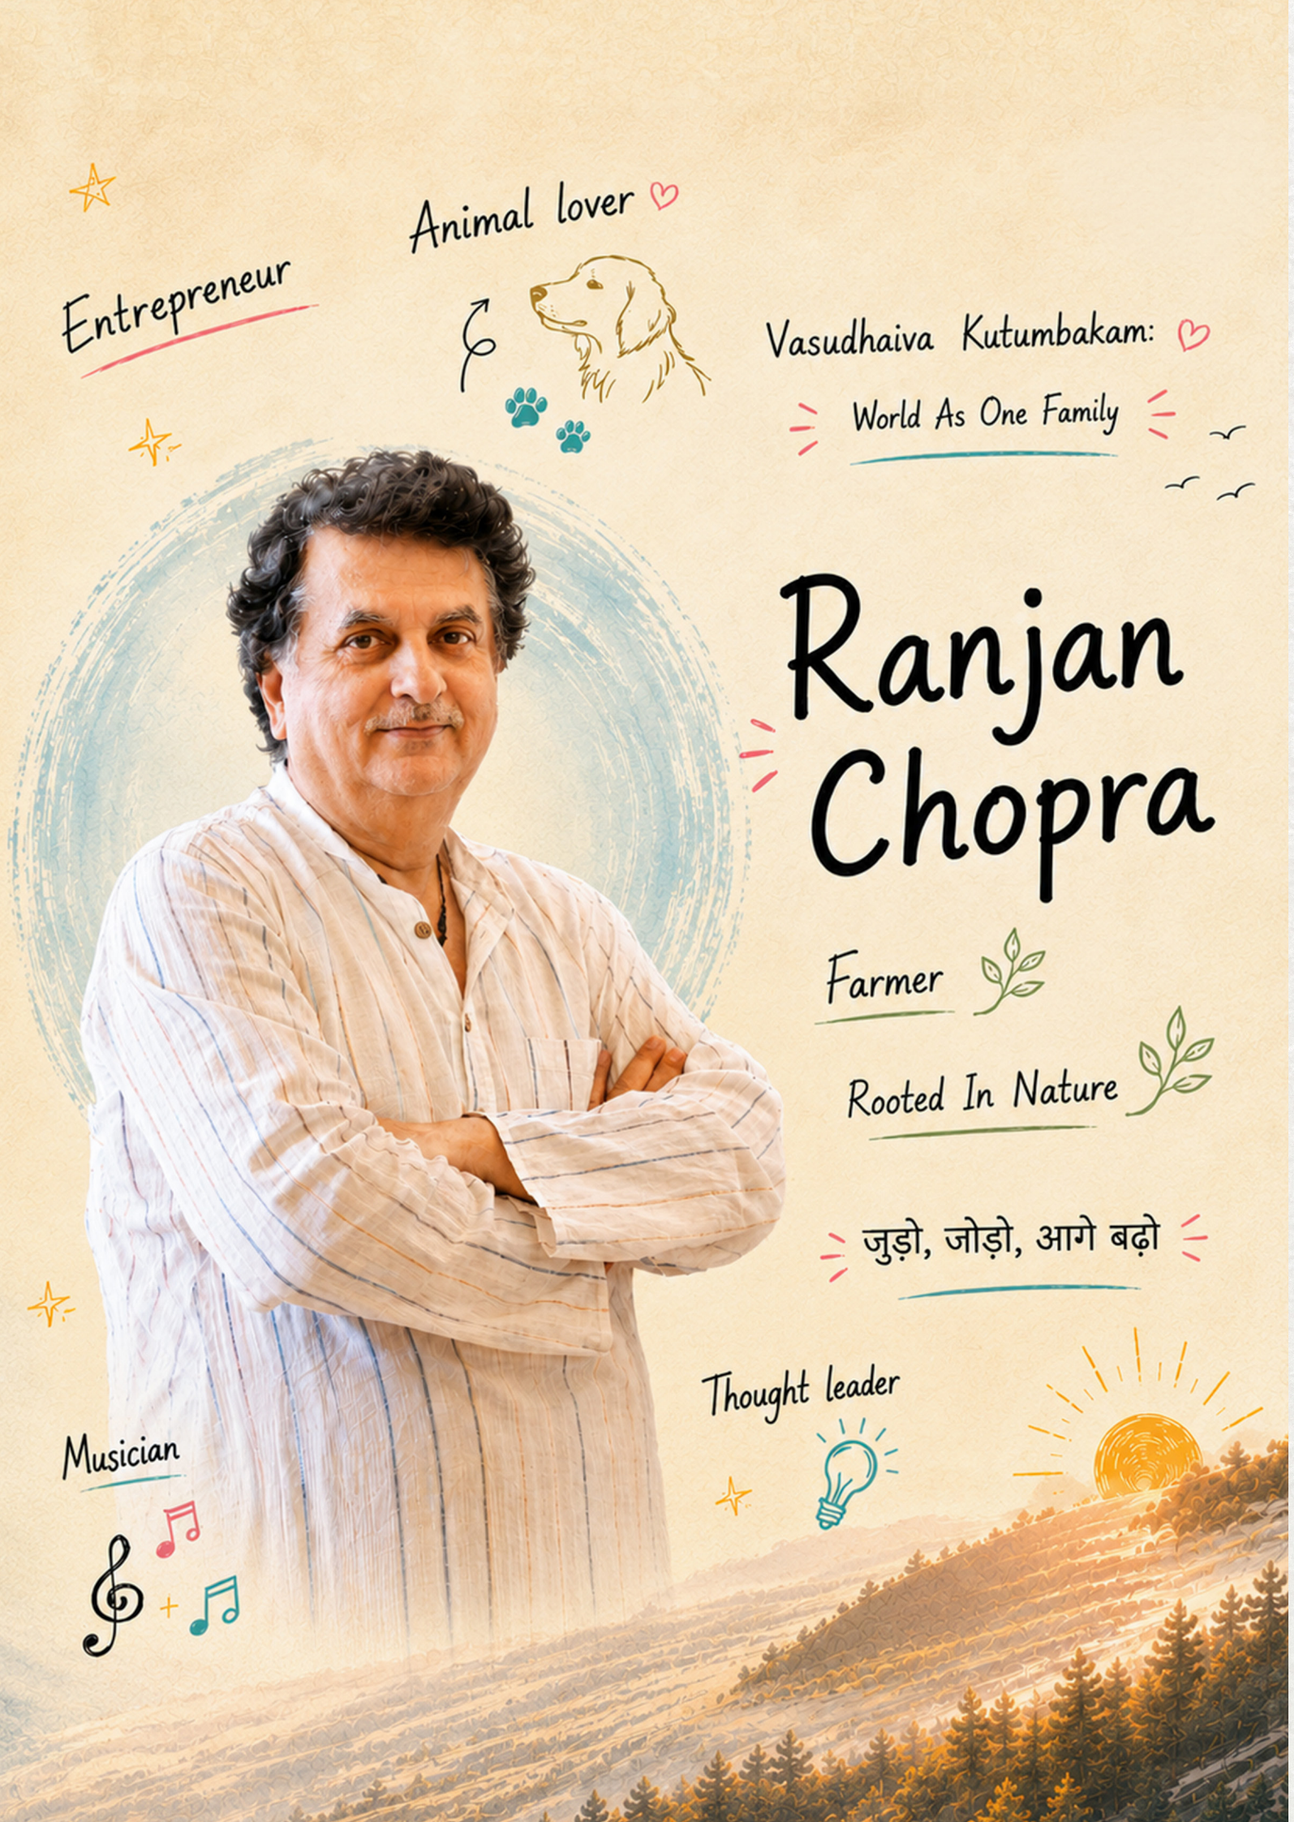

2025–26

Team Foundation

A CSR Arm of Team Computers

Creating Change.
Impacting Lives.

Founder's Note

When I **started Team Computers in 1987**, my focus was on technology - circuits, code, storage, and servers. I never imagined that journey would one day extend far beyond business and into communities that needed support, opportunity, and care. Over the years, our sense of responsibility grew beyond our customers to the people and places around us. This year, that commitment came to life in meaningful ways.

In Uttarakhand, over **2,200 students gained digital literacy and online safety skills, helping them navigate an increasingly connected world with confidence**. Our health centre enabled more than 4,200 consultations in remote villages, bringing essential healthcare closer to those who needed it most.

Through our pine pellet initiative, dry pine needles that once posed a **wildfire risk were transformed into clean fuel and sustainable livelihoods** - creating benefits for both families and forests.

Across **Delhi, Gurugram, Chandigarh, Meerut and Almora, thousands of stray animals were rescued, fed, vaccinated, and sheltered**. The way we care for the most vulnerable reflects the values we stand for.

None of this would be possible without our partners, field teams, and the communities themselves. We are proud to play a small role in creating lasting impact.

Team Foundation is our promise to keep working toward a future where every life around us is better because we are here.

Ranjan Chopra

Founder & Managing Director,
Team Computers | Team Foundation

About Team Computers

Founded in 1987 by IIT Kanpur alumnus Ranjan Chopra, Team Computers has grown from a hardware reseller in New Delhi into one of India's leading IT infrastructure and solutions providers. With expertise spanning hardware, software, cloud, analytics, cybersecurity, and managed services, the organisation **serves over 2,500 customers** through a network of **750+ support locations, backed by a team of 6,000+ members**.

For nearly four decades, Team Computers has remained committed to innovation, integrity, teamwork, and sustainability. At the heart of its journey lies **Sewa**, a belief that service extends beyond business to creating meaningful, lasting value for people, communities, and the nation. This philosophy continues to guide the organisation's commitment to responsible growth, community development, and a more inclusive and sustainable future.

About Team Foundation

For years, our CSR work grew quietly - project by project, community by community, shaped more by need than by structure. That was the right way to begin. But to go further, we needed a home for it all.

In August, 2025 we created one.

Team Foundation is Team Computers' dedicated CSR Arm

built to bring coherence, accountability, and scale to everything we do beyond the boardroom.

It is where our intentions become institutions, where one-off efforts become sustained commitments, and where ***Sewa*** becomes a system.

Team Foundation
Holds Three Pillars:

The Welfare of Animals
who share our cities and forests,

The Empowerment of People
who are one opportunity away from changing their lives.

The Protection of an Environment
that asks nothing of us but still gives everything.

Where We Work

Our CSR footprint began close to home -

Delhi NCR,
Uttar Pradesh, Haryana

and has since climbed into the

Himalayas,

reaching valleys and villages where development arrives late, if at all.

We sit with communities, listen to what they are missing, and build from there.

That is why **our work in Almora** looks nothing like our **work in Kanpur**, and our **work in Chandigarh** looks nothing like our **work in Meerut**.

We don’t design programs from a distance.

Animal Welfare

Compassion In Action

There are roughly 35 million stray animals in India.

They live on the margins of cities we built, eating what they can find, invisible until they become inconvenient.
We noticed. And we decided that was not good enough.

This year, across five programs and multiple cities, we worked to change what it means to be a street animal in India - one rescue, one meal, one shelter at a time.

April 2025 – March 2026

Animal Shelter Management

Not every injured animal makes it to safety. Most don't. They are left where they fall, or picked up too late, or returned to the same conditions that hurt them. The **Meerut Animal Shelter exists to interrupt** that cycle.

This year, it became more than a holding space. With structured **care routines, consistent medical support, and a team that genuinely loved the animals** in their charge, the shelter became a place where sick animals grew well again, where frightened ones **learned to trust**, and where the community began to see rescue not as someone else's responsibility - but as their own. Over 90 animals passed through. Far fewer left the way they came in.

Animals Found a Safe Shelter

April 2025 – March 2026

Animal Feeding Program

A hungry animal is a suffering animal. It is also, often, a more desperate one - more likely to spread disease, more likely to be feared and avoided by the very communities it lives alongside.

Across four cities, our feeding program reached **over 400 stray dogs and cows with regular, nutritious meals**. But what shifted wasn't just the animals' health - it was the relationship between them and the people who watched us feed them. Neighbours who once kept their distance started showing up with leftovers. Small acts, quietly spreading, because something that had seemed impossible turned out to be entirely possible.

May 2025 – March 2026

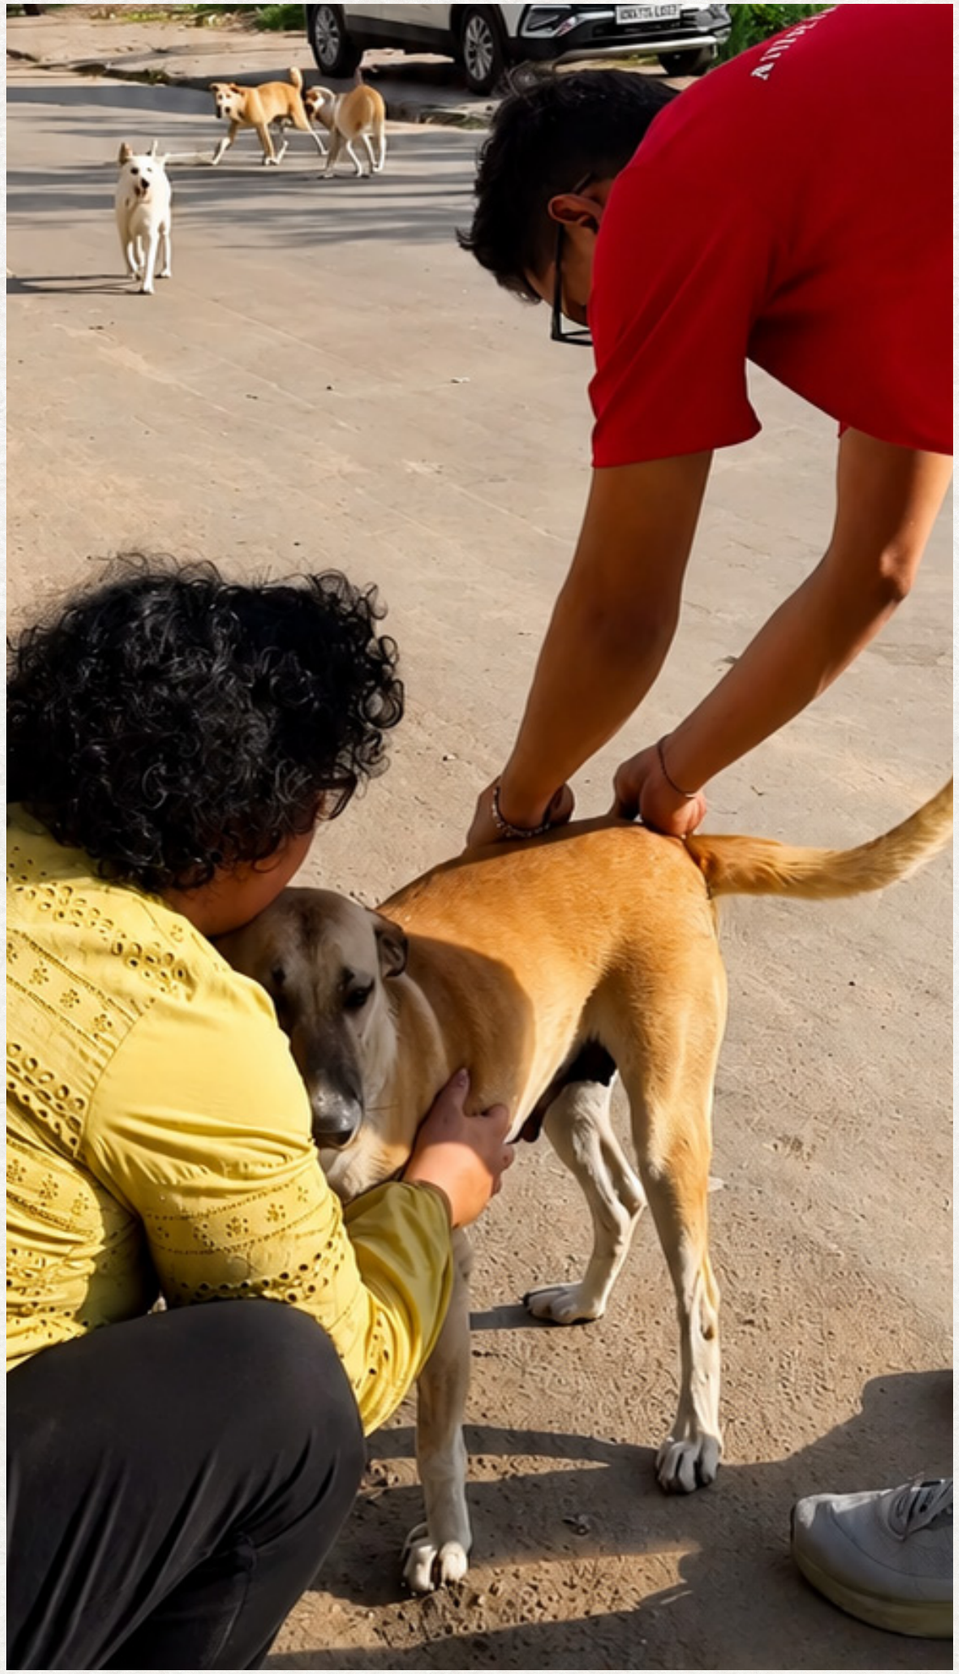

Animal Care Program

The hardest thing about animal welfare is that **rescue alone is never enough**. You treat one animal and miss the problem multiplying in the next street. Real change requires working at the level of the population, not just the individual.

This program did that. **Over 3,600 animals were sterilised, vaccinated,** and where necessary, brought in for rehabilitation across the tri-city region. The stray population stabilised. Disease spread slowed. And communities that had once called for the removal of street animals began, slowly, to advocate for their welfare instead. That shift in attitude may be the most lasting outcome of all.

Pukaar Animal Sewa Helpline

What do you do when you find a dog hit by a car at midnight? Or a cow with a wound on a Sunday?

In most cities, the answer is - not much. You wait and hope.

Pukaar changed that answer. The helpline ensured that **across Delhi NCR, 2,400+ animals had someone to call on their behalf** - a real team, ready to respond at any hour, with the equipment and training to actually help. Beyond the rescues, vaccination camps and sterilisation drives addressed the problem upstream. The result: fewer emergencies, because fewer animals were left vulnerable long enough for emergencies to happen.

Because no cry for help should go unanswered.

April 2025 – March 2026

Animal Shelter Construction

There is something about a well-built shelter that communicates more than utility. It says: **the lives inside this are worth investing in. Their safety is not temporary.**

This year, we built and expanded shelters in three cities - each designed not just for capacity, but for dignity. Animals inside are **protected from weather, infection, and the chaos of the street**. Each shelter, now more robust, can absorb more rescues in the years ahead.

With every brick laid, a future where no animal is left behind.

Human Welfare

Empowering People, Transforming Lives

India has no shortage of potential.
What it sometimes lacks is the **infrastructure to meet that potential halfway**

A teacher in a remote village, **a doctor** in a hill town, a mentor for a young person who simply doesn't know where to start.

Our human welfare programs are that infrastructure.

April 2025 – March 2026

Employment Skill Development Program

There is a particular kind of confidence that only comes from doing something real - not in a simulation, not in a classroom exercise, but in an actual workplace, with actual stakes. That is what this program was designed to create.

Thirty-five young people were put through **vocational training and placed into live work environments where learning was immediate and feedback was honest**. Most of them had never had that before. By the end, they weren't just more employable - they were more certain of themselves.

That certainty is something no recession can take away.

April 2025 – March 2026

Farmers Livelihood Enhancement

Farming in the hills of Uttarakhand is hard work on difficult terrain, often with seeds and methods passed down through generations without question. When those methods stop yielding what they once did, the farmer suffers silently - unsure what changed or what to do about it.

Fifty-plus farmers received access to better seeds, modern techniques, and the kind of practical guidance that comes from someone sitting beside you in the field, not lecturing from a distance. Yields went up. Costs came down. And farming started to feel like a viable future again, rather than a slowly closing door.

Digital Literacy Program

> In a country where digital fluency increasingly divides opportunity, that is not a small shift.

Most of these students had seen phones. Some had used them. But navigating the internet with confidence - **knowing which links to trust, what a scam looks like, how to use digital tools for learning** rather than just entertainment - that was something else entirely.

Across government schools in Almora and Nainital, **2,200+ students gained that foundation**. Teachers noticed the change immediately: children who had been passive became curious. The screen stopped being something that happened to them and became something they could use.

2200+

Students Gained Access to Digital Learning

April 2025 – March 2026

Swasthya Sewa Kendra - Health Centre

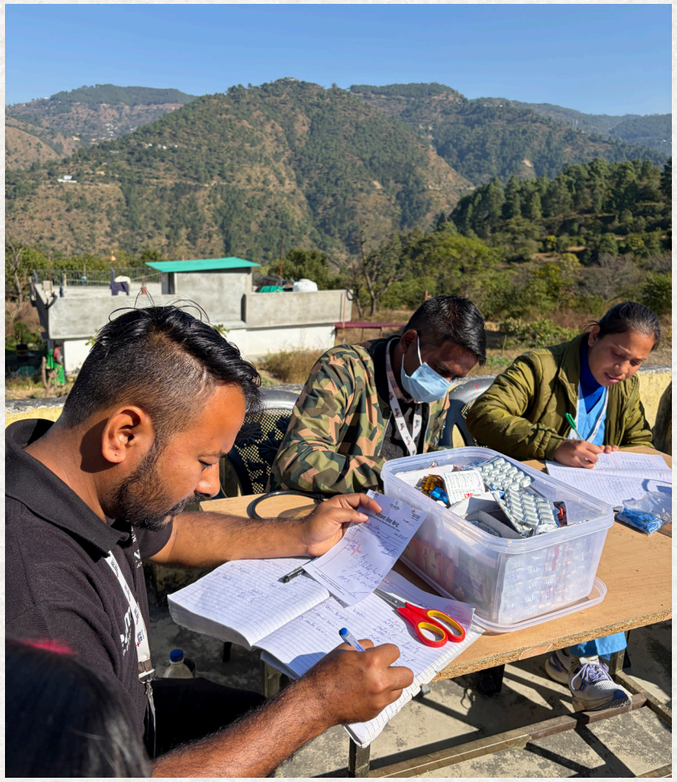

There are villages in the Almora hills where a medical consultation once meant a **half-day journey on mountain roads**. Manageable once, difficult twice, impossible when you are elderly, or pregnant, or too unwell to travel. For these communities, distance was not just inconvenience. It was a health risk in itself.

Our Swasthya Sewa Kendra covered over 30 such villages this year, delivering more than **4,200 consultations directly to people** rather than waiting for people to come to it. Primary care - the kind that catches problems before they become crises - arrived where people actually lived. The results are hard to fit into a single number. They live in the grandmother whose blood pressure was caught, the child whose fever was treated early, the woman who learned she was anaemic before it became dangerous.

Soil Testing Program

Generations of farmers have put the same inputs into the same land, trusting instinct and habit over data. But soil changes - it **depletes, acidifies, and shifts in ways the eye cannot see**. Applying the **wrong fertiliser to exhausted land doesn't just waste money**. It makes things worse.

Fifty-plus farmers in Almora received a clear picture of what their land actually needed - which **nutrients were missing, which crops were most likely to thrive, and where their inputs were being wasted**. For households where every input rupee is a real decision, that knowledge changed the calculus of the entire season.

April 2025 – March 2026

Empowering Local Potters

Pottery is one of the oldest human skills. In Kanpur, it was slowly being forgotten - not because people didn’t want to practise it, but because the market had moved on while the craft stood still.

Our program worked with 50+ potters to close that gap - upgrading techniques, improving the consistency of products, and opening new channels to reach buyers who genuinely wanted what these artisans made. The difference wasn’t only in their earnings. It was in how they talked about their work. Pride came back. The next generation started paying attention. A craft that had felt like inheritance began to feel like identity again.

> **Tradition, when nurtured, becomes legacy.**

Environment

Healing the Earth We Share

The Himalayan ecosystem is one of the most biodiverse and most fragile places on earth. It sustains rivers, forests, and millions of lives - and it is under pressure.

Our environmental program this year was precise in its target: a problem that arrives every year like clockwork and leaves destruction in its wake.

April 2025 – March 2026

Pine Pellet Production Program

> One program. The forest is safer. Families are earning. Kitchens are cleaner. That is what getting it right looks like.

Every October, the chir pine trees of Uttarakhand shed their needles. By April, those needles - dry, dense, and highly combustible - have blanketed the forest floor deep enough to turn a stray spark into a catastrophe. Forest fires that begin in pine needle beds have devastated thousands of hectares across these hills in recent years.

Our pine pellet production centre does something elegant: it turns the problem into the solution. Local community members are paid to collect pine needles from the forest floor - clearing the fuel load that starts fires and earning income in a region where work is scarce. Those needles are compressed into high-quality pellets that burn cleaner and longer than firewood, coal, or kerosene. Over 100 households received free pellets this year, cutting their dependence on fossil fuels in real, measurable ways.

Lives Touched

We started this year asking what it means to do this work well - not just efficiently, but well.

Twelve programs later,

we have our answer: it means staying until something real has changed.

Looking Ahead

The work we do is not defined by the projects we complete. It is measured by **the lives that move in a better direction because of choices we made. In 2025–26**, that movement was real and visible: a stray dog nursing back to health in a shelter we built, a farmer harvesting a better crop from land he finally understands, a child in a government school in Nainital who now knows how to protect herself online, a family in a remote Almora village receiving the healthcare they had quietly given up on.

These are not small victories. These are the foundations of something lasting. As Team Foundation enters its first full year of formal operations, **we carry with us the energy of everything** we have built and the humility of knowing how much more is possible. We are grateful to our partners, our communities, and every individual who chose to walk this path with us.

> Together, we are building a kinder, greener, and more inclusive tomorrow - one year, one life, one act of Sewa at a time.

Be Part of the Next Chapter

Every number in this report started as one decision - to show up, to notice, to act.

There’s more to do. More villages waiting for a doctor. More animals waiting for someone to notice them. More potential waiting for the right opportunity to meet it.

If our work moved you, there’s a place for you in it - as a partner, a volunteer, or simply someone who wants to know more.
